Abstract (Basic): JP 11084307 A

NOVELTY - Two optical units (214,213) guide an image to pupil.

Another optical unit guides light from an external environment to the pupil. A CCD camera (240) which has a visual field, is also provided. A magnetic sensor (220) detects the 3D position of the head. An LCD panel displays the image.

USE - In optic-see-through system used in medical applications, air hockey game apparatus.

ADVANTAGE - Measures operator's head position accurately since the camera for acquiring image ahead of operator is installed. DESCRIPTION OF DRAWING(S) - The figure shows the component of head mount display.

(213,214) Optical units; (220) Magnetic sensor; (240) CCD camera.
